It's not a RM issue. We are coming up with a solution with TCEQ now.

TCEQ is about to go manual due to lack of confidence in RM. the constant checking to verify data is eating their lunch.

Bryant,

Kelly Cook with TCEQ continues to have questions about RM data on this issue. It was our understanding it only related to different people pulling data at different times. Those issues were supposedly fixed yesterday, however, the problem seems to be continuing. TCEQ senior management is getting reluctant to rely on RM data. Please have Eric talk to Ronnie and get this fixed this evening if possible and if not then tomorrow. Ronnie and I also need to be able to explain what the issues is and what the fix was. Thanks
